

# Need High Speed Internet?

The FCC has created a new map showing where internet service is – and is not – available across the country. The map shows where internet service providers report service and includes input from consumers, like you.

## Help Improve the Map!

- Search for your address at [broadbandmap.fcc.gov](https://broadbandmap.fcc.gov)
- Is the location information wrong? [Click Location Challenge](#).
- Are the internet services listed not available? [Click Availability Challenge](#).

## Accurate Maps = Improved Access

An accurate map will help identify the communities most in need of funding for high-speed internet projects.

# Types of Challenges

## Location Challenges can:

- Add a missing location.
- Correct the address or other details of your location.
- Correct the geographic placement of your location.

## Internet Availability Challenges can:

- Correct services or reported speeds that are not available for purchase.
- Report a provider denial of a request for service or demand for connection charges that exceed its standard installation charge.
- Report provider failure to schedule an installation within 10 business days of a request for service or failure to perform the installation.

**Mobile Coverage Challenges** will be created using the FCC Speed Test App. To participate, download the App. The data that you share will be combined with other speed tests conducted in your area and may be used to create a challenge.
